BLUEPRINT
SECTION 1

Welcome to the Empower Africa Programme

What this programme is

A UNITAR training programme for youth- and women-led ventures across eleven African countries, delivered with the support of the People of Japan.

How Phase I runs

Five chapters between 27 August and 30 October — around 44 hours of self-paced courses and live webinars, with one Blueprint section released after each.

How to use this handbook

Your companion for Chapter 1: summaries, reflection prompts, and workpages for drafting. Draft here, then copy your answers into your Business Blueprint — that is the file you submit.

TIPS FOR YOUR LEARNING JOURNEY

Put your study hours in your calendar before you start. Chapter 1 carries around 18 hours across three weeks. Participants rarely fall behind because the material is hard; they fall behind because the time was never booked.

Handbook Contents

1

AI Foundations for Start-ups

Separating real AI from the hype, choosing between automation, prediction and personalisation, and testing honestly whether your data can carry an AI project.

2

AI-Powered Growth Engine

Putting AI to work across marketing and sales, customer support, operations and finance — and proving the return before you commit money to it.

3

HP AI Foundry Courses

Two edX courses: AI Fundamentals for the core concepts, and the mandatory AI in Society on bias, safety, regulation and the future of work.

4

Scaling AI

Turning the data your product generates into an advantage that compounds, and moving AI from a background tool to the core of what you sell.

5

Disruption Strategy

Designing a company around AI rather than on top of it, and building the twelve-month roadmap that turns this chapter into a plan.

6

Blueprint Section 1

Your workpages. Draft your Digital and AI Application answers here, then copy them into your Business Blueprint document — that is the file you submit.

Chapter #1

Digital Intelligence

Business Technology and AI Literacy

Chapter 1: Key Information & FAQ

AT A GLANCE

Duration: 27 August to 18 September 2026	Study time: Approx. 18 hours (6 hours/week)	Format: Self-paced e-courses, plus two live webinars	Platforms: Moodle (UNITAR) and edX (HP)	You submit: Business Blueprint Section 1	Chapter 1 Checkpoint: 80% passing grade with multiple attempts
---	--	--	--	---	--

Chapter syllabus

AI Foundations for Venture Growth • UNITAR • Moodle • Mandatory Two e-learning. What AI actually is and where it helps a venture; then putting AI to work across marketing, support, operations and finance.
AI Fundamentals: Core Concepts and Principles • HP • edX • Highly recommended AI history, data fundamentals, the types of machine learning, and explainability. Take it if AI is new to you. Not counted in your hours.
AI in Society: Ethics, Leadership & The Road Ahead • HP • edX • Mandatory Bias and fairness, safety, security and regulation, the future of work, and the debate about where AI is heading.
AI Roadmap for Startups Growth to Disruption • UNITAR • Moodle • Mandatory Two e-learning. Turning your data into an advantage that compounds; then designing an AI-native company and a twelve-month roadmap you can start on.
Blueprint Section 1: Digital & AI Application • Workpages in this handbook Your own venture's AI experiment, your biggest data gap, and your AI strategy. Drafted here, submitted on Moodle as your Blueprint document.

LIVE WEBINARS Both dates confirmed; times, topics and practitioners still to come

Webinar 1 • Monday 7 September 2026 • 10h00 CET (08:00 GMT/ 09:00 WAT/ 10:00 CAT / 11:00 EAT) • AI Foundations - Mid-Chapter Check In • UNITAR

Webinar 2 • Monday 14 September 2026 • 10h00 CET (08:00 GMT/ 09:00 WAT/ 10:00 CAT / 11:00 EAT) • AI Roadmap for Start-ups - Mid-Chapter Check In • UNITAR

Both sessions are recorded and posted to Moodle. Attend live where you can — that is the only time you can ask your own question.

My Notes

Write the task you will test, the tool you will test it with, and the date you start.

Starting Chapter 1 — and starting your experiment

- 1

Keep this handbook beside you
Download it before you begin. It carries the chapter summary, the reflection prompts, and the workpages where you draft your Blueprint section.
- 2

Work through Moodle in order
Start with AI Foundations for Venture Growth, then the two HP courses, then AI Roadmap for Startups. Each has a page here, named to match what you clicked.
- 3

Pick a tool and use it this week
Choose one real task in your venture and try an AI tool on it. Blueprint Section 1 scores what the tool actually did for you — including where it failed.
- 4

Keep the evidence as you go
Screenshot your conversations, save your logs, and note the moment the tool got something wrong. Section 1 asks you to attach evidence — a description alone will not do.

Frequently asked questions

Ten answers to the questions participants ask most often

01 Do I have to take HP AI Fundamentals?

No. It is highly recommended but not required, and it does not count toward your eighteen hours. Take it if AI is new to you.

02 Why is edX asking me to pay?

The referral code has not applied. Enter 6FJGJOTX7MFH5M2H when upgrading to the verified track. Do not pay — go back and enter the code.

03 Do I need a separate account for the HP courses?

Yes, an edX account. Register with the same email address as your Empower Africa application so your completion can be matched to your record.

04 Where do I submit my Blueprint?

On Moodle, as its own document. The workpages in this handbook are for drafting — copy your answers into your Business Blueprint file and submit that.

05 Is this handbook marked?

No. It is yours to keep and is never submitted. Your Business Blueprint is the document that is assessed.

06 When is Section 1 due?

Submit it when you finish Chapter 1, not at the end of Phase I. Later chapters may ask you to revise it — that is expected, not a mistake.

07 Do I actually have to use an AI tool?

Yes. Section 1 asks what a tool did for you, where it fell short, and evidence — a screenshot or log. Start in your first week.

08 What if I do not have a business yet?

“New Proposal” is a valid venture stage. Answer every question for the venture you are building, not for a business you do not have.

09 What if I miss a live webinar?

Recordings are posted to Moodle after each session. Attend live where you can — that is the only time you can ask your own question.

10 What if I get stuck?

Read the guidance box and the worked example first — they answer most questions. If you are still unsure, bring it to the next live session rather than leaving a field blank.

Need help? Read the guidance box and worked example first, then bring any remaining question to the next live session.

Module #1

AI Foundations for Venture Growth

Choosing where AI actually helps you

AI creates value for a startup in four distinct ways. Blueprint Section 1 asks which one your experiment targets, so this is the page you decide it from.

AUTOMATION

Repetitive work handled without you: data entry, document processing, scheduling, support replies. Lets a small team operate at a size its headcount would not normally allow.

PERSONALISATION

Analysing user behaviour to tailor what each customer sees — recommendations, targeted campaigns, customised experiences — without adding anyone to the team.

My Notes

Name your area and the task in one line. Then write what that task costs you each week in hours, and the errors it causes.

Data → Model → Decision

every new data point makes the model more accurate

PREDICTION

Anticipating what comes next: customer needs, demand, risk. Forecasts sharpen as more of your own trading history accumulates.

DECISION-MAKING

Turning raw data into something you can act on, so choices rest on what your business actually shows rather than on instinct.

Checking whether you have the fuel

AI is an engine and data is its fuel. Blueprint Section 1 asks which single dimension is holding you back, and how mature your data is. Both answers start here.

Data maturity has several dimensions, and a venture is rarely weak in all of them at once. Most are solid somewhere and blocked in one place. Find the dimension that blocks you, then place yourself on the four-level ladder.

- **Level 1 (Initial)** — Data is scattered across spreadsheets and disconnected systems, and analytics capability is limited.
- **Level 2 (Managed)** — Data is stored in structured databases, and basic reports are generated regularly.
- **Level 3 (Analytical)** — Advanced analytics and business intelligence tools are used to analyse what the data shows.
- **Level 4 (AI-Driven)** — Machine learning models and predictive analytics support productive day-to-day decision-making.

My Notes

Name the one dimension blocking you and the gap it creates. Count the data points you actually hold for that process. Then rate your level, honestly.

Module #2

Building Your AI-Powered Growth Engine

Putting AI to work across your business

A growth engine is the system that keeps growing when you stop pushing. Blueprint Section 1 asks you to plan AI across at least three business functions — these are the four it names.

An AI-powered growth engine collects data from every customer interaction, finds the pattern, acts on it, and feeds the result back in. It is a loop rather than a campaign, so it sharpens the longer it runs. AI enters that loop through four functions.

- **Marketing & Sales** — Predictive targeting replaces broad demographics, lead scoring ranks prospects by real engagement signals, and spend shifts automatically toward whatever converts.
- **Customer Support** — Conversational AI answers common questions, routes tickets to the right person, and flags the messages whose tone says a customer is about to leave.
- **Operations & Administration** — Invoices, records, reconciliation and scheduling run without manual handling, so your hours go to decisions that genuinely need judgment.
- **Finance, HR & Product** — Forecasting cash flow and demand, screening applications, and building intelligence into the product itself rather than only into the work behind it.

My Notes

For each of the four functions, name one AI use case you would invest in, and the data or capability it would need to work.

Proving the engine pays for itself

AI generates both direct revenue and indirect efficiency, which makes it easy to justify and hard to measure. Four steps, taken in order, settle the question before it becomes an argument.

1

Define the objective

Name the single business goal: more revenue, lower cost, or better customer experience. A project chasing all three cannot be judged fairly against any of them.

2

Choose the KPI

Pick metrics that match that objective — conversion rate, customer lifetime value, average order value, processing time, or operational cost.

3

Establish the baseline

Measure performance before the AI system goes live. Without a baseline there is no honest comparison — only a number that sounds good in a report.

4

Measure it and price it

After deployment, compare against the baseline and convert the difference into money. Invoice processing falling from twenty hours a week to three is a saving you can name.

My Notes

Write one KPI for each function. Then mark each baseline figure as tracked or estimated — the Blueprint asks you to say which, and honesty scores better than a guess dressed up.

HP AI Foundry Modules

AI Fundamentals: Core Concepts and Principles
AI in Society: Ethics, Leadership & The Road Ahead

AI Fundamentals: Core Concepts and Principles

Before you start the HP AI Foundry Courses

Recommended, not required, and not counted in your eighteen hours. Take it if AI is new to you — it makes everything in Chapter 1 easier to follow.

- 1

Access through Empower Africa Moodle

Open the course from the Moodle link rather than searching edX, so you land on the right one.
- 2

Register for the Courses

Register at edx.org using the same email address as your Empower Africa application.
- 3

Redeem the Verified Track

Apply referral code 6FJGJOTX7MFH5M2H when upgrading to the verified track. This makes your certificate free.

If you are being asked to pay, the code has not applied — go back and enter it.
- 4

Your Completion

Download your certificate as a PDF and upload it to Moodle when you finish.

My Notes

Before you start the HP AI Foundry Courses

Mandatory for every Phase I participant. It moves from how AI works to what its use costs and who carries that cost — including in your own venture.

- 1

Access through Empower Africa Moodle

Open the course from the Moodle link rather than searching edX, so you land on the right one.
- 2

Register for the Courses

Register at edx.org using the same email address as your Empower Africa application.
- 3

Redeem the Verified Track

Apply referral code 6FJGJOTX7MFH5M2H when upgrading to the verified track. This makes your certificate free.

If you are being asked to pay, the code has not applied — go back and enter it.
- 4

Your Completion

Download your certificate as a PDF and upload it to Moodle when you finish.

My Notes

AI in Society: Ethics, Leadership & The Road Ahead

Mandatory for every Phase I participant. It moves from how AI works to what its use costs and who carries that cost — including in your own venture.

BIAS AND FAIRNESS

Models learn from historical data, and historical data carries historical inequality. Fairness is not a setting you switch on — it is a series of choices made at every stage.

SAFETY, SECURITY AND REGULATION

How AI systems are attacked, how they fail, and how governments are responding. Rules differ by market, and the market you sell into sets the standard you must meet.

THE FUTURE OF WORK

Which tasks shift, which roles disappear, and which are created. Directly useful to a founder deciding what to automate and what to keep human on purpose.

WHERE THIS IS HEADING

Healthcare breakthroughs, business impact, and the debate about artificial general intelligence — enough grounding to judge the claims you will hear from vendors and investors.

My Notes

For the tool you tested: whose data did you use, and did you have the right to use it? What could it not do for your context, and what did it get wrong?

Module #3

Scaling AI: From Product-Market Fit to Competitive Advantage

Turning your data into an advantage that compounds

Reaching product-market fit is a milestone. Scaling without losing what made the product work is the harder problem — and data is what makes the gap difficult for others to close.

WORKED EXAMPLE

Netflix: 80% of what people watch comes from AI recommendations trained on proprietary viewing behaviour.

My Notes

Unlike most business assets, AI systems improve as they are used. More users generate more data, which trains better models, which make a better product, which brings more users. That loop is the AI flywheel — the difference between a lead that erodes and one that widens.

- **Proprietary data** — Data your competitors cannot access. Public datasets produce models anyone can replicate; data your own product generates cannot be bought.
- **Continuous collection** — The dataset grows every time the product is used, so the advantage accumulates without a separate acquisition effort.
- **Network effects** — Each additional user improves the insight available to every other user, which makes the product more valuable as it grows.
- **High switching cost** — Customers stay because the system has learned their behaviour. Leaving means starting that learning again somewhere else.

Moving AI from tool to feature to product

Where AI sits in your product decides how defensible you are. Most ventures start at level one and stall there. Scaling means climbing on purpose.

This UNITAR module also covers predictive analytics, churn and lifetime value, team structure and ethical AI.

Level 1 — AI as a tool

Used behind the scenes to improve internal work: support chatbots, automated analysis, marketing automation. Helpful, but invisible to the customer and easy for anyone to copy.

Level 2 — AI as a feature

A visible capability inside the product: recommendations, image recognition, smart search. Customers notice it, but the product still functions without it.

replication boundary

Level 3 — AI as the product

The product's core value is its intelligence: fraud detection, writing assistants, recommendation platforms. Remove the AI and there is no product left.

Above this boundary, a competitor cannot replicate the venture simply by buying the same off-the-shelf tool.

My Notes

Which level are you at today, and what would move you up one? Name the data you would need, the role you would hire, and the safeguard you would put in place first.

Module #4

Disruption Strategy: Becoming an AI-Native Company

Designing a company around AI, not on top of it

The earlier modules were about using AI well. This one asks a harder question: what does a company look like when AI is the foundation rather than a tool bolted to the side?

My Notes

Data as a strategic asset

User and operational data is collected and analysed continuously by design, not gathered afterwards when someone finally asks for a report.

Machine-augmented decisions

AI assists or automates complex decisions as a matter of course, and people spend their judgment where it genuinely changes the outcome.

Continuous learning systems

The product improves automatically through feedback loops, so performance rises between releases rather than only at them.

Your 12-month AI disruption roadmap

The roadmap that turns everything in this chapter into a plan you can start on your Day 1. Four stages, twelve months, each producing something the next stage of your business or start up needs.

1

Months 1–3 • Opportunity identification

Analyse your industry for the places AI creates advantage. Evaluate operational inefficiencies, identify high-impact use cases, and assess honestly what data you can actually access.

2

Months 4–6 • Prototype development

Build small-scale prototypes to test the strongest use cases. Develop the models, integrate them into existing products, and test with a limited user group before going wider.

3

Months 7–9 • Product integration

Move working prototypes into production. Scale the infrastructure, improve model accuracy on real usage, and optimise the experience so the intelligence feels invisible.

4

Months 10–12 • Market expansion

Launch the AI-powered services, expand customer acquisition on the back of them, and strengthen the data pipelines so improvement continues without new investment.

My Notes

Write where you would invest in AI first, why it matters to your business, and how it creates measurable value. Your months 1–3 commitment is the sentence that answer opens with.

Business Blueprint

Section 1: Digital & AI Application

BUSINESS BLUEPRINT

Empowering Youth and Women amid Economic Instability — Individual Participant Blueprint

HOW TO USE THIS SECTION— READ BEFORE YOU START

This Blueprint is completed by you, working on your own. There are no group activities — every instruction, question, and self-check below is written for you to complete individually, at your own pace.

- 1. ONE SECTION AT A TIME.** You will receive this blueprint one section at a time on Moodle, matched to the chapter you have just completed: Section 1 is released with Chapter 1, Section 2 is released with Chapter 2, Section 3 is released with Chapter 3, and so on.
- 2. THE BLUEPRINT IS ONE LIVING DOCUMENT.** Do not start a new file for each section. Keep working in this same file, adding each new section as it is released, and revising earlier sections when a later chapter asks you to. Save your work after every session. Every section you complete belongs to the same ONE Blueprint document. Feel free to copy past older sections when a new section is released with a next Chapter, instead of starting over every time. When Phase I ends, you will submit ONE document only that includes all completed Blueprint sections.
- 3. COMPLETE EVERY FIELD, IN THE FORMAT GIVEN.** Fields, checkboxes, and word caps are fixed. Do not turn a field into free-form text, and do not exceed the word cap shown under each label. If a field does not yet apply to you, write "Not yet applicable" rather than leaving it blank.
- 4. EXAMPLES ARE FOR GUIDANCE ONLY.** Every question in this workbook is followed by a short, worked example in light grey text, showing you what a strong answer looks like. These examples describe a fictional venture and are included purely to help you understand the kind of answer expected. You must delete each grey example and replace it with your own answer. Do not copy, adapt, or leave any part of an example in your submission — copied examples will be identified and will not be scored.
- 5. SUBMIT EACH SECTION WHEN YOU COMPLETE THE CHAPTER.** Do not wait until the end of the programme. Some sections of the Blueprint will be re-shared with later chapters to be revised based on your learning. These revisions are expected and are not a mistake.
- 6. KEEP YOUR OWN COPY.** Save this file, and your answers within it, on your own device, drive or email. You are responsible for keeping a copy of your own work throughout the programme.
- 7. IF YOU GET STUCK.** Each section opens with a short "How to answer this section" box and, where useful, a self-check. Read these first — they are designed to answer most questions before you need to ask them. If you are still unsure after reading the guidance and the example, note your question in the margin and raise it at the next live session rather than leaving the field blank.
- 8. FIELDS MARKED  JAPAN PARTNERSHIP DATA.** These feed the investment-readiness and partnership-matching process later in the programme. Complete these with particular care and honesty — incomplete, vague or generic answers will not score well.
- 9. AT THE END OF PHASE I, YOU SUBMIT ONE DOCUMENT.** You will be asked to upload your complete Blueprint to date, plus your 1-minute elevator pitch, once all released sections are finished. An unsubmitted or partial document cannot be assessed. Further submission instructions will be given when Phase I closes.

Empower Africa Programme

Participant & Venture Identification

Complete this page before starting Section 1. Update it if any details change later in the programme.

 FULL NAME (First Name/s and LAST NAME) Example (for guidance only — do not copy): Jane Joy DOE	 VENTURE NAME
 COUNTRY OF BUSINESS OPERATIONS (select AT LEAST ONE from the list of countries below) Botswana · Ethiopia · Ghana · Kenya · Nigeria · Rwanda · South Africa · Tanzania · Uganda · Zambia · Zimbabwe	
 SECTOR (select ONE most appropriate sector from the 12 sectors below) 1. Agri-Food & Innovation · 2. AI, Robotics & Smart Digital Solutions · 3. Fintech & Financial Inclusion · 4. Clean Tech & Strategic Resources · 5. Climate & Environmental Solutions · 6. Healthcare & MedTech · 7. Sustainable Cities & Mobility · 8. Blue Economy · 9. Creative Industries · 10. Light Manufacturing & Industrial Solutions · 11. Skills Development & the Future of Work · 12. Social Impact & Essential Services Example (for guidance only — do not copy): 3. Fintech & Financial Inclusion	
 VENTURE STAGE (New Proposal / Existing Business — select one) Example (for guidance only — do not copy): Existing Business	DATE OF LAST REVISION (This is for your own tracking only)

Section 1 • Chapter 1

Digital & AI Application

Built on Chapter 1: Digital Intelligence — Business Technology & AI Literacy

GUIDANCE

This section is about applying what Chapter 1 taught you to your own venture — not describing AI in general. Every answer must be specific to something you actually did: a tool you used, a task you tried to automate, or a limitation you personally encountered. A general description of what a tool can do — rather than what it actually did for you, including where it fell short — will not count as genuine application and will score poorly on the fields marked for partnership screening. Think particularly about critical thinking (would you have trusted this output without checking it?), using AI responsibly (whose data did you use, and did you have the right to use it?), and understanding its practical limitations (what could it not do for your specific context?).

DIGITAL/AI TOOLS USED

(max. 15 words)

Example (for guidance only — do not copy): ChatGPT and a WhatsApp Business chatbot to draft customer replies.

OPPORTUNITY AREA IT TARGETS

(select one: Automation / Prediction / Personalisation / Decision-Making — max. 10 words)

Example (for guidance only — do not copy): Automation — reducing time spent on repetitive customer queries.

GENUINE LIMITATION OF THE TOOL YOU USED — WHAT IT COULD NOT DO, OR GOT WRONG, NOT JUST ITS BENEFIT

(max. 30 words)

Example (for guidance only — do not copy): The chatbot misread local slang in customer messages twice, giving irrelevant answers, and could not handle price negotiation without me stepping in manually.

YOUR BIGGEST DATA GAP — WHICH OF THE SIX DIMENSIONS IS HOLDING YOU BACK, AND THE SINGLE BIGGEST GAP BETWEEN THE DATA YOU HOLD TODAY AND WHAT YOUR AI IDEA WOULD NEED

(select one dimension: Availability / Quality / Organisation / Infrastructure / Governance / Culture / Labelling — max. 25 words)

Example (for guidance only — do not copy): Quality — my 18 months of sales records are handwritten and inconsistent, so I cannot yet use them to train any predictive tool.

Section 1 • Chapter 1

Digital & AI Application

Built on Chapter 1: Digital Intelligence — Business Technology & AI Literacy

PROCESS CONSIDERED FOR AUTOMATION — HOURS/WEEK IT COSTS AND ERRORS IT GENERATES

(max. 20 words)

Example (for guidance only — do not copy): Manual order-tracking in a notebook; costs roughly 5 hours/week and causes 2–3 missed deliveries monthly.

DATA AVAILABLE TO TRAIN ON FOR THIS PROCESS

(max. 15 words)

Example (for guidance only — do not copy): About 400 past orders recorded, but only in paper form, not digitised.

EVIDENCE OF APPLICATION — BRIEF DESCRIPTION OF A SCREENSHOT OR SHORT LOG ATTACHED SEPARATELY

(max. 20 words)

Example (for guidance only — do not copy): Screenshot attached showing three chatbot conversations with customers over the past two weeks, including one failed handoff.

🇯🇵 JAPAN PARTNERSHIP DATA — DATA MATURITY SELF-RATING (INITIAL/ MANAGED / ANALYTICAL / AI-DRIVEN) AND IS THE AUTOMATION OPPORTUNITY YOU SCORED ABOVE BACKED BY REAL NUMBERS YOU CURRENTLY TRACK, OR BY YOUR BEST ESTIMATE (STATE WHICH, AND NAME THE NUMBER)

(max. 25 words)

Example (for guidance only — do not copy): Basic — the 5 hours/week figure is my best estimate based on two weeks of informal timing, not a tracked record yet.

🇯🇵 JAPAN PARTNERSHIP DATA — BASED ON YOUR AI EXPERIMENT, THE FIVE CHAPTERS, AND THE LIMITATIONS/DATA GAPS YOU IDENTIFIED, WHAT IS YOUR AI STRATEGY FOR BECOMING AN AI-NATIVE BUSINESS?

(max. 100 words)

Explain where you would invest in AI first, why it matters to your business, and how it will create measurable value. Consider at least three business functions (e.g., Marketing & Sales, Customer Support, Operations & Administration, Finance, HR, Product/Service Development).

Section 1 • Chapter 1

Digital & AI Application

Built on Chapter 1: Digital Intelligence — Business Technology & AI Literacy

Japan Partnership — Data Your AI Strategy

Identify your priority AI investment, expected business impact, key data or capability needed, and one measurable KPI.

BUSINESS FUNCTION	AI INVESTMENT / USE CASE	EXPECTED BUSINESS IMPACT	DATA / CAPABILITY NEEDED	KPI
Marketing & Sales				
Customer Support
